

This document describes the proposed delivery tracking process and the interaction between customers, delivery partners and the delivery tracking system.

Use Case Diagram

Use Case Description

Use Case: Track Delivery

Primary Actor: Customer

Supporting Actor: Delivery Partner

Goal: Allow the customer to view the progress of an active delivery, including the delivery partner's approximate location and estimated delivery time.

Preconditions

- The customer has placed an order.
- Order has been accepted.
- Order has reached the **"Out for Delivery"** stage.
- Delivery partner has been assigned.

Main Flow

1. Customer opens the active order.
2. System identifies the order as "Out for Delivery."
3. System opens the delivery tracking screen.
4. System retrieves the latest available delivery partner location.
5. System displays the delivery partner's approximate location on the map.
6. System displays the customer's delivery location.
7. System displays the current delivery status and ETA.
8. Delivery partner's location is periodically updated.
9. System updates the tracking information.
10. Customer continues to monitor the delivery until it is completed.
11. System stops active tracking when the order is delivered or cancelled.
