

User Stories & Acceptance Criteria

1. View Delivery Partner Location

User Story

As a customer, I want to view the approximate location of my delivery partner on a map so that I can understand the progress of my delivery.

Acceptance Criteria

- Given the order status is **"Out for Delivery"**,
- When the customer opens the order tracking screen,
- Then the system should display the delivery tracking map.
- The map should display the customer's delivery location.
- The delivery partner's approximate location should be displayed when location data is available.
- The displayed location should be associated with the customer's active order.

2. View Updated ETA

User Story

As a customer, I want to view the estimated delivery time along with the delivery partner's location so that I can better understand when my order is likely to arrive.

Acceptance Criteria

- Given the order is **"Out for Delivery"**,
- When the customer opens the tracking screen,
- Then the estimated delivery time should be displayed.
- The ETA should be displayed along with the delivery status.
- The ETA should be updated when new delivery information is available.
- The customer should be able to see the ETA without leaving the tracking screen.

3. Handle Location Unavailability

User Story

As a customer, I want to be informed when the delivery partner's location is temporarily unavailable so that I am not misled by outdated tracking information.

Acceptance Criteria

- Given the delivery partner's location is unavailable,
- When the customer opens the tracking screen,
- Then the system should display a clear message indicating that the location is currently unavailable.
- The system should not display outdated location information as the current location.
- The customer should still be able to view the order status.
- The customer should still be able to view the ETA if available.

Example message: **"Delivery partner location is currently unavailable. Your order is still on the way."**

4. Delivery Completion

User Story

As a customer, I want delivery tracking to stop when my order is delivered so that the tracking information accurately reflects the completed delivery.

Acceptance Criteria

- Given the order status changes to **"Delivered"**,
- When the customer opens the order tracking screen,
- Then the system should display the order as delivered.
- Live/near-real-time location tracking should stop.
- The delivery partner's location should no longer be displayed as an active location.

5. Handle Location Update Delay

User Story

As a customer, I want to know when the delivery location was last updated so that I can understand whether the displayed location is the correct one.

Acceptance Criteria

- Given the delivery partner's location has not been updated for a defined period,
- When the customer views the tracking screen,
- Then the system should indicate that the location was last updated some time ago.
- The system should not present an outdated location as real-time.
- The customer should continue to see the order status and ETA when available.

Example: **"Location was last updated 2 min ago."**

Edge Cases

Edge Case 1 : GPS/Location Unavailable

Scenario: Delivery partner's device cannot provide location.

Expected behavior:

Show "Location currently unavailable" and continue displaying order status/ETA where available.

Edge Case 2 : Poor Internet Connectivity

Scenario: Delivery partner has poor network connectivity and location updates are delayed.

Expected behavior:

Display the last update time and avoid presenting stale information as the current location.

Edge Case 3 : Customer Has Poor Internet

Scenario: Customer opens the tracking screen with weak/no internet connectivity.

Expected behavior:

Show the most recently available order status and an appropriate message indicating that live tracking cannot currently be updated.

Edge Case 4 : GPS Location Is Inaccurate

Scenario: GPS reports an inaccurate location.

Expected behavior:

Display the location as approximate and avoid implying that it represents the exact position of the delivery partner.

Edge Case 5 : Delivery Partner Stops Sharing Location

Scenario: Location sharing becomes unavailable during an active delivery.

Expected behavior:

Stop displaying the location as current and show a location-unavailable message while continuing to display other available order information.

Edge Case 6 : Order Is Cancelled

Scenario: An order is cancelled while tracking is active.

Expected behavior:

Stop delivery tracking and display the cancelled order status.

Edge Case 7 : Order Is Delivered

Scenario: Delivery is completed while the customer is viewing the map.

Expected behavior:

Stop active location tracking and update the screen to "Delivered."

Edge Case 8 : App Is Closed/Reopened

Scenario: Customer closes the app while tracking the delivery and opens it again later.

Expected behavior:

The customer should be able to reopen the active order and view the latest available tracking information.
